

A DECISION FRAMEWORK FOR INTEGRATED WETLAND-RIVER BASIN MANAGEMENT

IN A TROPICAL AND DATA SCARCE ENVIRONMENT

MIJAIL EDUARDO ARIAS HIDALGO

A Decision Framework for Integrated Wetland-River Basin Management in a Tropical and Data Scarce Environment

DISSERTATION

Submitted in fulfillment of the requirements of
the Board for Doctorates of Delft University of Technology
and of the Academic Board of the UNESCO-IHE Institute for Water Education
for the Degree of DOCTOR
to be defended in public on
Monday 17 December, 2012 at 15:00 hours
in Delft, the Netherlands

by

Mijail Eduardo, ARIAS HIDALGO
born in Guayaquil, Ecuador

Bachelor of Civil Engineering,
Escuela Superior Politécnica del Litoral (ESPOL), Guayaquil, Ecuador
Master of Water Science and Engineering (with distinction),
UNESCO-IHE, Institute for Water Education, Delft, the Netherlands

This dissertation has been approved by the supervisors:

Prof. dr. ir. A. E. Mynett

Prof. dr. ir. A.B.K. van Griensven

Members of the Awarding Committee:

Chairman	Rector Magnificus, Delft University of Technology
Vice-chairman	Rector, UNESCO-IHE
Prof. dr. ir. A.E. Mynett	UNESCO-IHE / Delft University of Technology, supervisor
Prof. dr. ir. A.B.K. van Griensven	UNESCO-IHE/ Vrije Universiteit Brussel, supervisor
Prof. dr. ir. U. Shamir	Technion Institute, Israel
Prof. dr. ir. P.L.M. Goethals	Universiteit Gent, Belgium
Prof. dr. ir. P. van der Zaag	UNESCO-IHE / Delft University of Technology
Prof. dr. ir. M.J.F. Stive	Delft University of Technology
Prof. dr. ir. G.S. Stelling	Delft University of Technology (reserve member)

Contents

Acknowledgments	13
Summary.....	15
Samenvatting	19
I Introduction.....	23
I.1 Wetlands	23
I.2 Current status of wetland research	26
I.3 The WETWin project.....	27
I.3.1 Concepts and scope	27
I.3.2 Case studies and work packages in the WETWin project	28
I.4 The balance between simplicity and complexity in water modeling	31
I.5 Research questions	33
I.6 Research objectives	34
I.7 Thesis outline	34
II The Abras de Mantequilla case study.....	37
II.1 The Guayas River Basin.....	37
II.2 The Abras de Mantequilla wetland system	40
II.3 DPSIR chains and main pressures on the system	44
II.4 Scenarios.....	47
II.4.1 Climatic variations	47
II.4.2 The Baba multipurpose project.....	47
II.4.3 The DauVin project	48
II.5 Management Options & Solutions	49
II.5.1 Option 0 - <i>Business As Usual</i>	50
II.5.2 Option 1 – Minor infrastructure works.	50
II.5.3 Option 2 – Improvement of agricultural practices.	50
II.5.4 Options 3 & 4 – Crop conversion.	50
II.5.5 Option 5 – Ecological corridors.....	50
II.5.6 Management Solutions	51
II.6 Data collection	51
II.7 Concluding remarks.....	56
III A simple pattern simulation in daily streamflow series*	57
III.1 Introduction	57
III.2 The Hodrick-Prescott filter	59
III.2.1 General Equations	59
III.2.2 The behaviour of the short-term component.....	61
III.2.3 The Block Homoskedastic approach	62
III.2.4 The Heteroskedastic approach	64
III.3 A further application: estimation of gaps in time series	66
III.3.1 Fourier series	66
III.3.2 Selection of the <i>best</i> alternative	67
III.3.3 Computational setup	67
III.4 Results & Discussion.....	70
III.5 Concluding remarks.....	75
IV Ecohydraulics modelling of the AdM wetland-river system*	77

IV.1	Introduction and justification for modeling.....	77
IV.2	The modeling framework.....	78
IV.3	Rainfall-runoff models: setup and results	82
IV.3.1	Vinces upper subcatchment.....	82
IV.3.2	The Chojampe-AdM subcatchment	89
IV.4	The use of TRMM data for the Vinces upper catchment*	92
IV.4.1	Current status of the research and worldwide experiences.....	92
IV.4.2	Methodology and Results	94
IV.4.3	Performance of complementary TRMM data for the HMS model	102
IV.5	The unsteady river flow model.....	103
IV.5.1	Justification	103
IV.5.2	Model setup and results.....	103
IV.6	The water allocation model (Guayas River Basin).....	108
IV.6.1	Setup and simulation of current conditions.....	108
IV.6.2	Simulation of Scenarios	114
IV.6.3	Simulation of Management Solutions	118
IV.7	Value functions for the quantitative indicators.....	119
IV.8	Concluding remarks.....	120
V	Stakeholder appreciation of management solutions*	123
V.1	Introduction	123
V.2	Expert elicitation in AdM.....	124
V.3	Socio-economic / Institutional indicators and value functions	125
V.4	Ecological indicators and value functions.....	127
V.4.1	Biodiversity.....	127
V.4.2	Degradation.....	128
V.4.3	Eutrophication	130
V.5	Evaluation of the Management Solutions	132
V.6	Concluding remarks.....	133
VI	Decision Support Framework for the AdM wetland-river system*	135
VI.1	Theoretical considerations.....	135
VI.1.1	General concepts	135
VI.1.2	Multi-criteria Analysis and decision space	136
VI.2	Decision rules	140
VI.2.1	Simple Additive Weighting (SAW).....	140
VI.2.2	The TOPSIS method.....	141
VI.3	DSS in catchment-wetland systems	142
VI.4	NetSyMoD and MDSS5	143
VI.5	mDSS application on the AdM case study	146
VI.6	Results & Discussion.....	151
VI.7	Concluding remarks.....	153
VII	Conclusions and recommendations	155
VII.1	Conclusions	155
VII.2	Recommendations.....	158
References		161
Appendix A:		171
A.1	Introduction for the questionnaire	172
A.2	Instructions for the questionnaire	174

Appendix B:	181
