# Contents

<b>1</b>	<b>Discontinuous Evolution of Urban Historical Forms</b>	1
1.1	Introduction	1
1.2	Agglomeration and the Formation and Sudden Growth of Cities	4
1.2.1	The Debate	4
1.2.2	Instability and Agglomeration	5
1.3	Long-Distance Trade and Instability	13
1.3.1	Another View: Open Versus Closed Cities	13
1.3.2	The Mees Version of Pirenne's Hypothesis	14
1.3.3	Comparative Advantage and City Size	16
1.3.4	Logistical Networks and Long-Distance Trade	17
1.4	A Possible Synthesis: The Role of Technological Change	18
1.4.1	Agglomeration, Logistical Networks, and Technology	18
1.4.2	Rome Was Not Built in a Day	20
	Notes	22
<b>2</b>	<b>The New Economic Geography Approach and Other Views</b>	23
2.1	The Setting	23
2.2	The Three Returns to Scale	26
2.3	The Dixit–Stiglitz Model of Monopolistic Competition	28
2.4	Bifurcations of the NEG Core–Periphery Model	30
2.5	The Core–Periphery Model at the Global Level	34
2.6	Chaotic Dynamics in a Discrete Version of the Core–Periphery Model	36
2.7	Criticisms of the New Economic Geography	38
	Notes	41
<b>3</b>	<b>Discontinuities in Intraurban Systems</b>	43
3.1	Some General Remarks	43
3.2	The Role of Transportation in Urban Structural Bifurcations	44
3.2.1	Modal Choice in Transportation	44
3.2.2	Urban Retail Structure	46
3.3	An Ecological View	48
3.3.1	Density–Rent Cycles	48
3.3.2	Intraurban Lotka–Volterra Instability	50

3.4	Static and Dynamic Boundary Discontinuities . . . . .	52
3.4.1	Neighborhood Boundary Dynamics . . . . .	52
3.4.2	Land Use Boundaries . . . . .	56
	Notes . . . . .	61
<b>4</b>	<b>Morphogenesis of Regional Systems . . . . .</b>	<b>63</b>
4.1	The Continuous Flow Model . . . . .	63
4.1.1	Linear and Nonlinear Variations . . . . .	63
4.1.2	Structural Change of the Flow Pattern . . . . .	65
4.1.3	Wave Patterns in the Continuous Flow Model . . . . .	67
4.1.4	Multiplier–Accelerator Cycles in the Continuous Flow Model . . . . .	67
4.2	Evolution of Urban and Regional Systems . . . . .	69
4.2.1	Predator–Prey Cycles in Single Cities . . . . .	69
4.2.2	Interregional Predator–Prey Cycles . . . . .	71
4.2.3	The Emergence of Chaotic Dynamics . . . . .	74
4.3	Self-Organizing Regional Morphogenesis . . . . .	76
4.3.1	Order Through Fluctuations . . . . .	76
4.3.2	Time Scales and Slaves . . . . .	78
4.3.3	A Fractal Synergenesis . . . . .	80
	Notes . . . . .	82
<b>5</b>	<b>Complex Dynamics in Spatial Systems . . . . .</b>	<b>85</b>
5.1	Complexity and Socioeconomic Spatial Systems . . . . .	85
5.2	The Generality of the Schelling Model . . . . .	86
5.3	An Evolutionary Game Theoretic View of the Schelling Model . . . . .	88
5.4	Network Analysis of the Schelling Model . . . . .	89
5.5	Zipf's Law and Urban Hierarchy . . . . .	93
5.6	Urban Hierarchy with Discrete Levels . . . . .	97
5.7	Bottom-Up or Top-Down Development of Urban Hierarchies? . . . . .	100
	Notes . . . . .	104
<b>6</b>	<b>Perspectives on Economic and Ecologic Evolution . . . . .</b>	<b>107</b>
6.1	Historical Perspectives . . . . .	107
6.1.1	Origins . . . . .	107
6.1.2	Dialectical Difficulties . . . . .	108
6.1.3	Evolution and the Equilibrium Concept . . . . .	110
6.1.4	Cycles and Chaos . . . . .	111
6.2	Continuous Versus Discontinuous Theories of Evolution . . . . .	112
6.2.1	Gradualism . . . . .	112
6.2.2	Saltationalism . . . . .	113
6.3	Hypercyclic Morphogenesis of Higher-Level Structures . . . . .	115
	Notes . . . . .	117
<b>7</b>	<b>Evolution and Complexity . . . . .</b>	<b>121</b>
7.1	The Ups and Downs of the Darwinian View of Evolution . . . . .	121
7.2	The Ups and Downs of Darwinian Evolutionary Economics . . . . .	126

7.3	The Multilevel Complication . . . . .	128
7.4	Self-Organization and Natural Selection . . . . .	131
	Notes . . . . .	136
<b>8</b>	<b>Ecosystems and Economics . . . . .</b>	<b>139</b>
8.1	Nonlinear Bionomic Dynamics . . . . .	139
	8.1.1 Single-Species Models with Density Dependence . . . . .	139
	8.1.2 Two-Species Lotka–Volterra Models . . . . .	142
	8.1.3 Complexity and Stability in Multispecies Ecosystems . . . . .	145
8.2	The Bioeconomics Synthesis . . . . .	147
	8.2.1 The Perversities of Open-Access Renewable Resource Use . . . . .	147
	8.2.2 The Special Problem of Extinction . . . . .	156
	Notes . . . . .	160
<b>9</b>	<b>Complex Ecologic-Economic Dynamics . . . . .</b>	<b>163</b>
9.1	The Intertemporally Optimal Fishery . . . . .	163
9.2	Complex Expectational Dynamics in the Optimal Fishery . . . . .	166
9.3	Complexity Problems of Optimal Rotation in Forests . . . . .	169
9.4	Problems of Forestry Management Beyond Optimal Rotation . . . . .	174
9.5	Complex Lake Dynamics . . . . .	176
9.6	Stability and Resilience of Ecosystems Revisited . . . . .	180
	Notes . . . . .	184
<b>10</b>	<b>The Limits to Growth and Global Catastrophe Revisited . . . . .</b>	<b>187</b>
10.1	Neo-Malthusian Collapse Models . . . . .	187
10.2	Renewable Versus Nonrenewable Resources . . . . .	189
10.3	Managing Potential Catastrophe . . . . .	190
10.4	The Entropy Argument . . . . .	192
	10.4.1 Entropy as the Ultimate Limit . . . . .	192
	10.4.2 Entropy and Value . . . . .	194
	10.4.3 The Vision of the Steady-State Economy . . . . .	194
	Notes . . . . .	195
<b>11</b>	<b>How Nonlinear Dynamics Complicate the Issue of Global Warming . . . . .</b>	<b>197</b>
11.1	Prologue on the Science of Global Warming . . . . .	197
11.2	Could a Combined Global Climate–Economic System Be Chaotic? . . . . .	199
11.3	Competing IAM Models . . . . .	201
11.4	The Discounting Issue Again . . . . .	204
11.5	Positive Feedbacks, Fat Tails, and Fundamental Uncertainty . . . . .	206
	Notes . . . . .	209
	Appendix . . . . .	213
	References . . . . .	263
	Index . . . . .	313
